Overview

Goal:

Spatial access to linked sets of media

A new way to collect and file digital possessions

Spaces to accumulate ideas

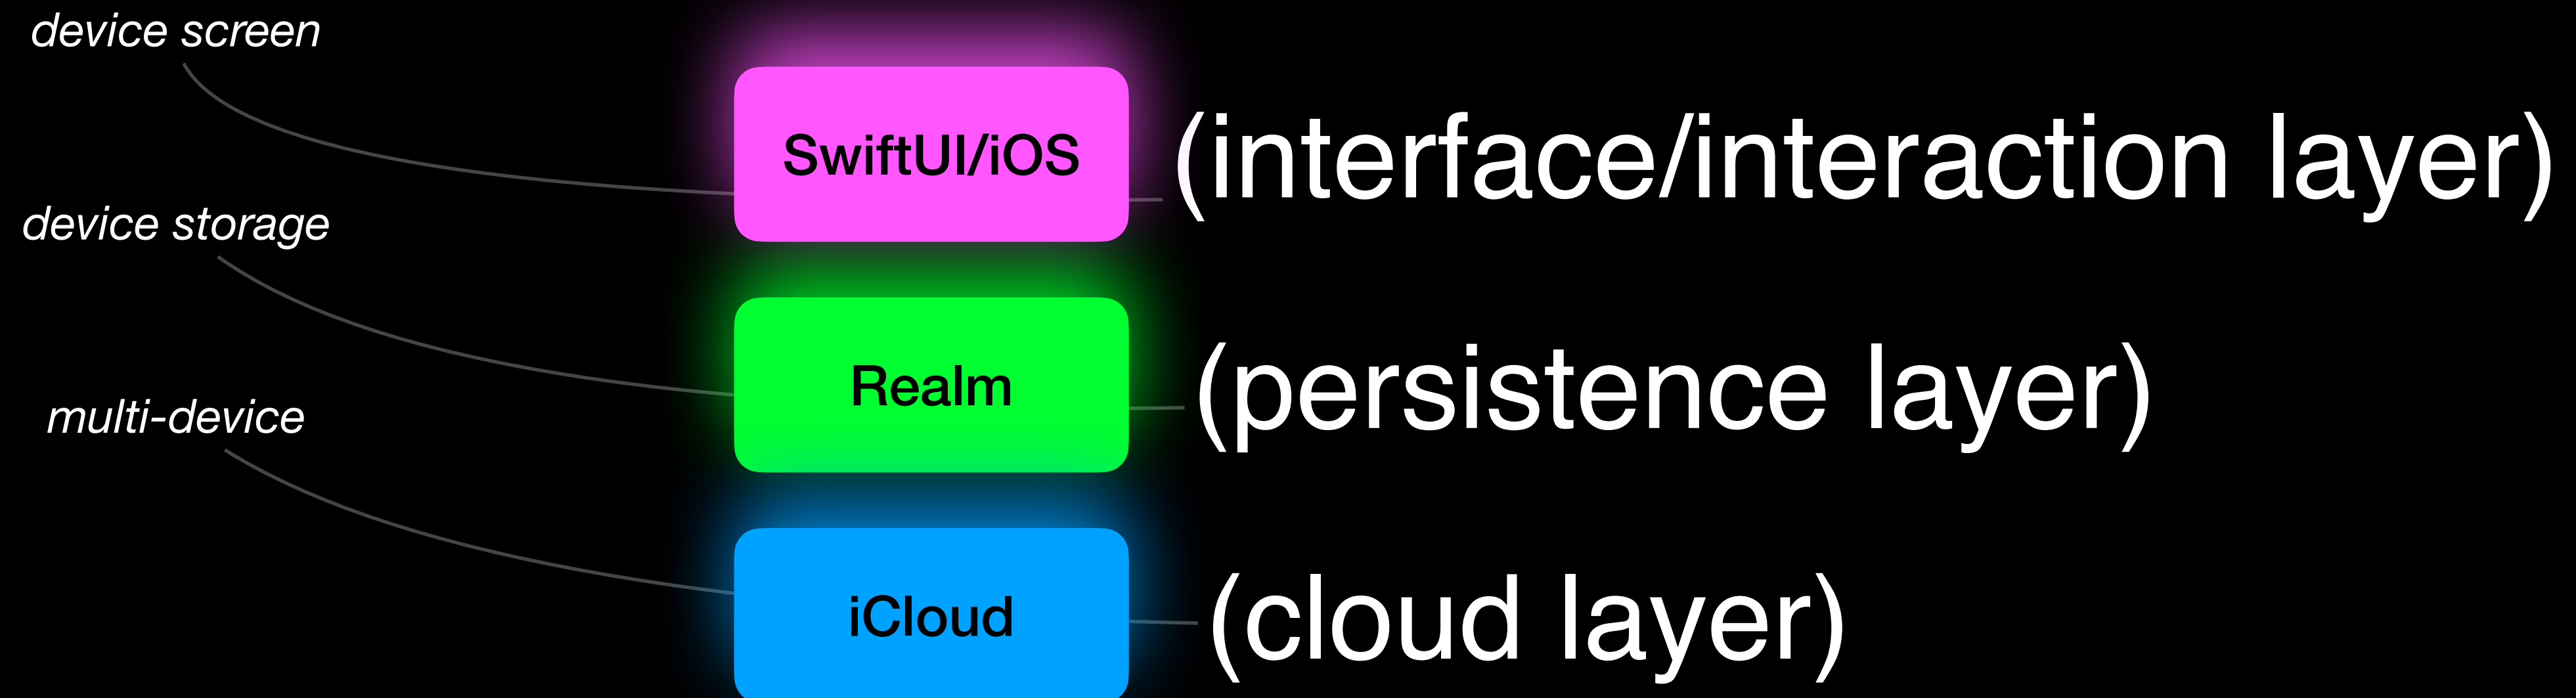

Audience:

Anyone with an iPhone

(appealing specifically to collectors, creators)

“this app should come with the phone”

Technologies:

Design: Core Interface Problem

How do you arrange 3 levels of data into a single phone screen?

Design: Interfaces

Library

Everything (~100+)

"Stored Memory"

All collected media,
sorted and grouped

*shelves/drawers/boxes/stacks of
books, references, music, movies,
clippings,*

Office

Some (~10 - 100)

"Cache"

Sets of media,
grouped according
to task/purpose

desks/tables/boards/surfaces

Desk

One-ish (1~10)

"Working Memory"

Set of active media
in current focus

a single surface

Design: Interface Metaphors

Library

Finder

Office

Tabs

Desk

Canvas

Design: Data

Everything is an **Item**

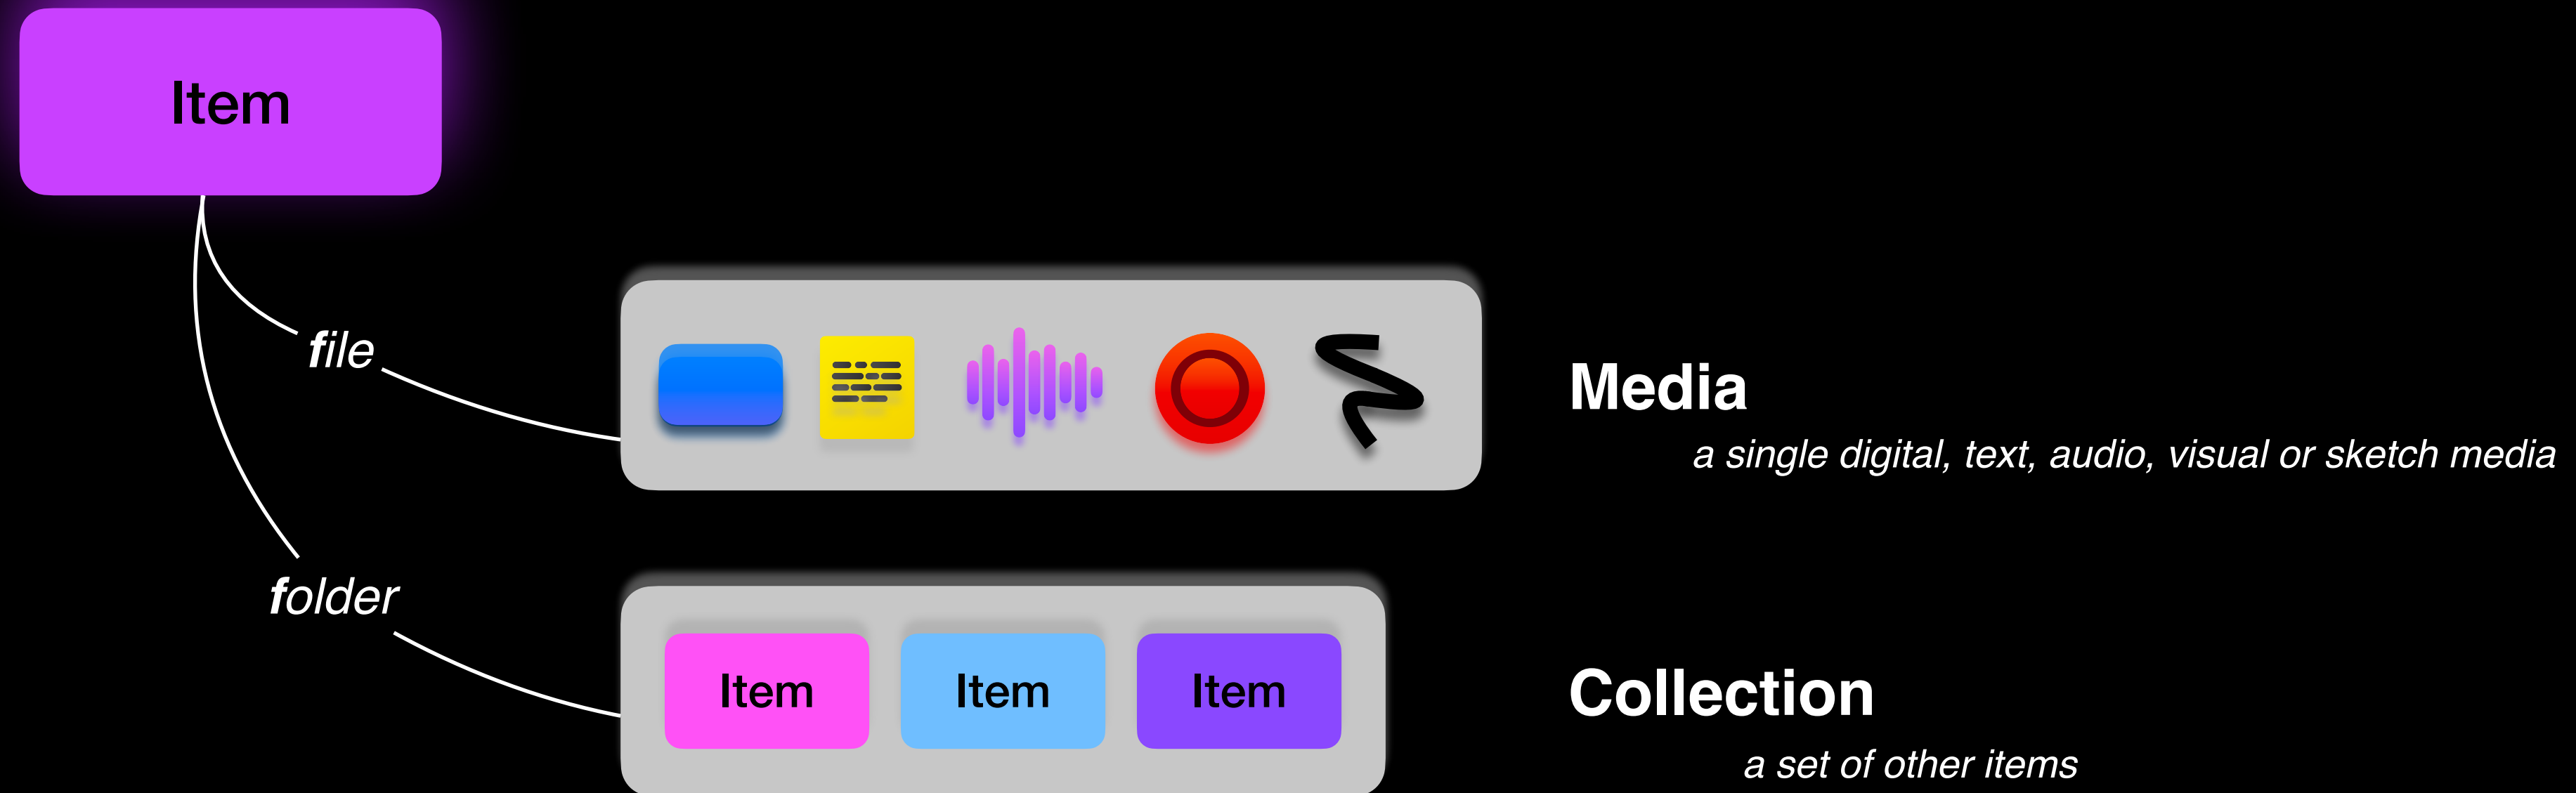

Items can be viewed on **Desks**

Our **Library** holds all our **Items**

Our **App** connects the **Library** to a set of **Desks (Office)** and an interactive **Desk**

Design: Item

Item = File + Folder
(media + collection)

Design: Media

Roadmap

High-Level

- Basic View and Data Architecture
 - Item, Media (some)
- Media: Text and Images
 - Plain Text
- Core Interactions:
 - Navigation
 - Share
 - Card Actions
 - Card Dragging
 - Card Selection
 - ...

- Expand and Refine View and Data
 - Add Tags, more Media
- Media: Recording, Music, Web, File, Sketch
 - Rich Text
- Some Media Interactions:
 - trimming
 - filtering
 - stylizing

- Expand and Refine View and Data
- Round out more Media types
- Implement more sophisticated card and media interactions (layouts, editing)

MVP

Sellable iOS app

Improved iOS app

watchOS app

MacOS app

iPadOS app

more media types, more complex interactions, more devices

By Summers End

By Years End

Next Few Years

Far Off in the Distant Future

MVP

Data Architecture

- Database
 - Item
